About Scooterpac

Lifestyle mobility products

Scooterpac is a company with one aim in mind - to change the way things are done for the better. Whether that means inventing new technology that helps people live fuller lives, or catering to niche markets ignored by other manufacturers, Scooterpac wants to help. Headed by a team with more than thirty years' experience in the mobility market, and a world-class engineering department new and exciting products emerge from the Scooterpac workshops every few months - and they always make headlines. Headquartered in the Norfolk Broads, and sold around the world, Scooterpac is changing the lives of people everywhere.

Mk2 Arrives Today...

2 Years in the making

When the original cabin car hit the market a few years ago, the response was incredible. With cabin cars shipping to all corners of the globe, and customers placing orders in 20 different languages, we knew something big was happening. Almost immediately the Scooterpac engineering team started work on the designs and evolutions of the Mk2. From the ground up the car was examined and improved, from a new wheel design to an entirely new technology in shell production. The result is something special. The cabin car Mk2 is by far the most advanced, luxurious and distinctive mobility scooter on the market today.

Always striving for greatness

“We wanted to build the best, the most luxurious and the most desirable mobility product ever. For us, it was a matter of pride that no other scooter on sale in the world would come close to matching what we’ve done with the cabin car Mk2. It’s what drove us on day after day”

Dane Lawrence, Scooterpac Founder

- Remote Central Locking

Optional
Extras 

Maralyn Godfrey

“My cabin car has given me back the freedom that I lost when I had to sell my car. I feel confident driving around town in it, even after dark, in a way that I simply never could on a traditional scooter. The heater, parking sensors and the charge ports for my SatNav make me feel so at home - I couldn't imagine life without it now!”

Richard Whithers

“When I returned from Afghanistan with serious lower-leg injuries I thought my life was over. As an active person, whose life centred around the outdoors, the idea of being confined to my house filled me with dread. The Cabin Car has given me back the freedom I was craving. It doesn't look or feel like a product for grannies, so I don't feel embarrassed leaving it outside a pub or taking it to the shops.”

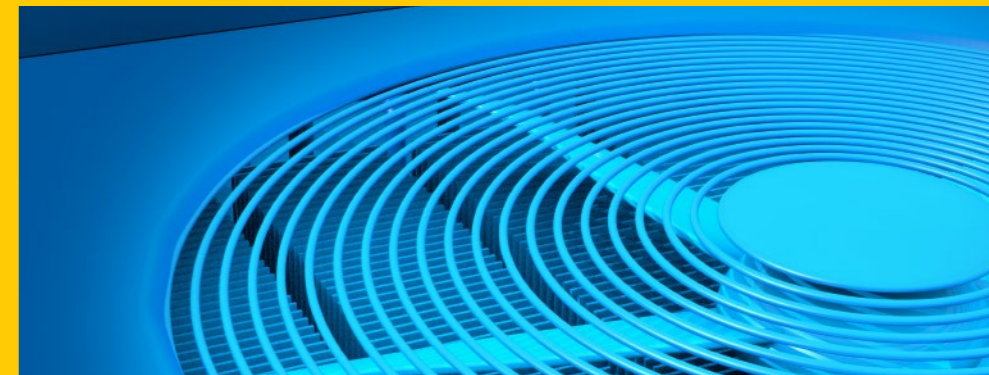

Interior Options

Sports Seating

Feel more connected to the vehicle with our race seat option. More supportive at the sides, with grippy fabric and classic sporty profile these seats make the driving experience come alive.

Cool Air System

Make the most of your cabin car Mk2 during summer by adding our custom-designed cool air system. Powerful enough to drive more than 50 litres of air into the cabin every minute, it's sure to keep you cool on the hottest days.

Safety Seat Belt

A perfect accompaniment to our racing seats, this seat belt can be fitted to the cabin car Mk2 to add another dimension of safety. It provides a great sense of security for users wishing to travel on public roads with their vehicle.

External Options

Custom Paint Colours

Choose from 100s of different paint colours and our engineers will custom make your Cabin Car Mk2 so you can have things exactly as you'd like them.

Electric Folding Mirrors

Adding the Electrically Folding Mirror package makes it easy to fold the mirrors in at the touch of a button.

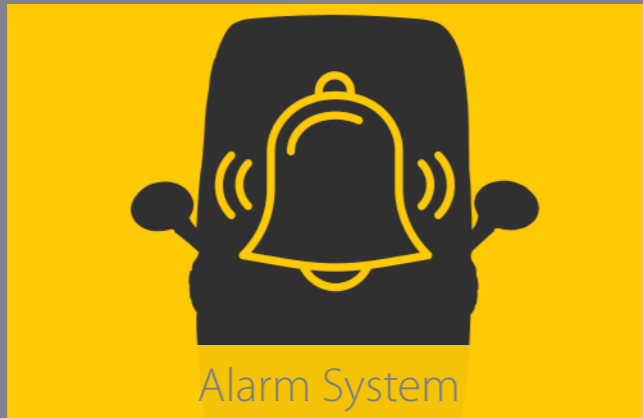

Front Bumpers

Protect your cabin car Mk2 from bumps and scrapes with our custom front bumpers.

Rear Bumpers

Make sure that your cabin car Mk2 is safe when reversing by adding these rear bumpers that extend out to protect your car.

Alarm System

Protect your investment by adding a high-volume alarm to your cabin car Mk2, that will sound when the car is tampered with.

External Charging Adapter

The outdoor external charging lead is a waterproof, weatherproof way to charge your cabin car Mk2 from the outside, allowing you to lock the doors for safety.
